PT-3 Foundations Capstone Project - Golf Course List

Overview

I will make a webpage where the user can create a list of golf courses they desire to play. Once they have played that course then they can add it to a list of courses already played and give it a rating. Also they will be able to delete a course from either list. I will create a seed list of well known courses but also allow the user to add their own if it's not on the list.

MVP Features

-User can make a list of courses to play
-User can make a list of courses already played and rate them
-User can delete a course on either list

Planning

-Wireframe for the view
-List of MVP features above
-Data model.

Front End features

-5 semantic tags
-1 view page
-flexbox stylilng
-1 responsive view
-animated styling

Server

-App to include GET, POST, PUT, and DELETE endpoint handler functions.
-Will use a controller file
-Sequelize

Database

-Will include a seed file
-app will use at least 4 tables
-app will use a foreign key and join

Presentation

-Will discuss the purpose of the project and demonstrate MVP features
-Will not discuss broken or non-functioning aspects
-Video recording will be between 2-3 exactly.
